

## **OPTO 22**

# **SNAP-PAC-S1 and some ioControl string commands**

## **APPLIES TO**

SNAP-PAC-S1

## **SYMPTOMS**

A SNAP-PAC-S1 may reset or lock up if an ioControl command requiring two string parameters is used within a subroutine, and at least one of the strings is being accessed by another process. Examples of these types of commands are *Get Substring* and *Move String*. ioDisplay and ioControl debug watch window are examples of processes that could access the string variables.
